

Jim Small

GM's economical alternative to rebuilding in kind.

Rebuild that old locomotive and you still have old locomotive features and performance. Or trade up to the new GP15-1 replacement locomotive and get improved performance with lower operating costs.

The GP15-1 offers significant advantages over rebuilding in kind. Such as all-new

construction using certain re-manufactured components from your trade-in GP or F-type locomotives. And maximum interchangeability of parts and components with your mainline fleet.

It carries EMD's standard 2-year or 250,000 mile warranty. Incorporates our latest

engine technology, including reduced visible smoke and gaseous emissions. Weighs approximately 240,000 pounds. And comes with a 2400-gallon fuel tank. No rebuild ever gave you all that.

The result is a new locomotive for branch or mainline service at lowest possible cost.

With EMD engineering know-how and experience built in. Contact your local EMD sales representative for further details.
